

4 Steps of the Vampire Facial® Procedure

1. The provider isolates growth factors from the patient's blood.
2. The provider uses a micro-needling device to create multiple micro-punctures driving the growth factors into the skin, and the micro-punctures tighten the skin by increasing production of collagen.
3. The provider reapplies growth factors onto the micro-punctures for further accelerated stimulation and rejuvenation.
4. The provider applies Altar™ post procedure to synergistically enhance the effects of the previous steps, and the patient continues application twice daily on an ongoing basis to accelerate healing and increase skin firmness, elasticity and improve texture.

*Still the hottest new procedure
with the Stars because it enhances
your own natural beauty...*

Do You Show These Signs of Aging?

1. Skin color has become grayer because of less blood flow?
2. Fine vertical lines around the mouth?
3. Scars from trauma, acne or chicken pox?
4. Skin texture has become less smooth. As a result, the person looks "worn", "tired" or "droopy". The lively, rosy hue (seen plainly in children and young adults of every skin color) has faded to a dull gray?

Ask your physician about **Altar™** post-treatment topical and how its patented formulation will accelerate and help preserve the results of your treatment.

Why the Vampire Facial®?

There are many ways to rejuvenate the face. You may have tried some of the following strategies:

- Skin creams and facial peels may be helpful but not strong enough to rejuvenate the tissue adequately.
- Retin A® and other prescription medication (like hydroquinone) may improve texture; however, results may be minimal and slow to be realized.
- Hyaluronic Acid fillers (HAs) restore volume but do not increase firmness.

With the Vampire Facial®, growth factors, combined with micro-needling, turn on the skin's healing mechanisms, leading to a decrease in fine lines and wrinkles, increased elasticity and firmness, smoother texture and younger color.
